"Distribution and Prevention of Cardiovascular Diseases in Yugoslavia"

Belgrade, Narodno Zdravlje, Vol 22, No 5, 1966, pp 152-161

Abstract: There is an everincreasing evidence that the cardiovascular diseases are on the rise in Yugoslavia. The authors discuss the characteristics and classification of data concerning these diseases, the size of the problem in Yugoslavia, the mortality and morbidity from these diseases, and suggest also various, mostly preventive and epidemiological measures for the control of cardiovascular diseases. The arguments are supported by comprehensive statistical data organized into tables and diagrams. The processing of data is carried out according to disease as well as according to geographic regions. There are 12 Yugoslav references.

AUTHOR: Djordjević, C.

TITLE: Magnetic susceptibility of several quadratic quadri
covalent and tetragonal sexi-covalent complexes of divalent
copper

PERIODICAL: Referativnyy zhurnal. Khimiya, no. 3, 1962, 11, abstract
3345 (Croat. chem. acta, v. 32, no. 4, 1960, 163-167)

TEXT: The magnetic susceptibility has been measured at room temperature and
the effective magnetic moments determined (μ , in μ_B , figs. in brackets) for
the following quadratic complexes of divalent copper with the general formula
 $[\text{Cu}(\text{NH}_3)_4]\text{X}_2$: $\text{X} = \text{NO}_3 - (1.83)$, $\text{X} = \text{NO}_2 - (1.84)$, $\text{X} = \text{CNS} - (1.81)$,
 $\text{X} = \text{SO}_4^{2-} - (1.80)$; for the following tetragonal complexes with the general
formula $[\text{Cu}(\text{NH}_3)_6]\text{X}_2$: $\text{X} = \text{Cl} - (1.80)$, $\text{X} = \text{Br} - (1.95)$, $\text{X} = \text{J} - (1.95)$, and
also for complexes $\text{Cu}(\text{C}_5\text{H}_7\text{O}_2)_2$ (1.96) and $\text{Cu}(\text{C}_5\text{H}_7\text{O}_2)_2 \cdot 2\text{NH}_3$ (1.93). It is
stated that there is no significant difference in the μ of complexes with
Card 1/2

Magnetic susceptibility of several...

different stereochemistry. The conclusion is drawn that it is not possible to distinguish flat square and tetragonal complexes of divalent copper on the basis of their magnetic susceptibilities. [Abstracter's note: Complete translation.] ✓

Abstract: [Authors' Serbocroatian summary modified] The
tuberculin index was 46 percent among 799 schoolchildren
7 to 10 years old in Ripanj. Eighteen cases of tubercu-
losis were discovered. Pupils who did not react to the
tuberculin after a second testing were vaccinated. Test-
ing six months later showed that tuberculin allergy had
been established in 86.9 percent of those vaccinated.

Belgrade, Acta Veterinaria, Vol 13, No 1, 1963, pp 67-69.

Abstract: [Authors' German summary modified] Twenty-five animals were affected, 17 of which died of the disease. Clinical manifestations included diarrhoea, loss of appetite, apathy, and loss of weight. Patho-anatomical study established changes in the spleen, liver, stomach, intestines, and lungs. A catarrhal process was observed in the duodenum, jejunum, and ileum. Acute glomerulonephritis was discovered in the kidneys in many cases. Salmonella typhimurium, E. coli, Proteus, B. subtilis, and staphylococcus albus were isolated.

"Atrophy of the Optic Nerve Resulting from Expansive Growths in the Paranasal Cavities."

Belgrade, Srpski Arhiv za Celokupno Lekarstvo, Vol 91, No 6, June 1963, pp 583-588.

Abstract: [Authors' German summary modified] The authors discuss the possibilities of damage to the optic nerve from expansive processes in the paranasal cavities on the basis of existing literature and of their own experience. Such cases are often greatly delayed in appearing, for which reason rigorous examinations are essential in the event of the slightest symptoms suggestive of the development of a tumor. The authors describe a few cases of tumors in the paranasal cavities which caused not only interference with normal vision but also ophthalmologically visible changes in the papillae of the optic nerve.

TITLE: Simulation of pregnancy as subject of forensic expertise

SOURCE: Medicinski glasnik, no. 4-5, 1965, 108-109

TOPIC TAGS: biologic reproduction, medicine

ABSTRACT: Case report of a woman aged 25 who had had gynecologic surgery which rendered her sterile without her knowledge; her husband threatened divorce as he wished to have children; eventually she pretended that she was pregnant and fooled everybody, passing as her own an infant boy which she bought from a gypsy girl; this was discovered after a family quarrel and a forensic medical examination uncovered the past medical history. "Two Operations for Tumors of the Colon."

Belgrade, Srpski Arhiv za Celokupno Lekarstvo, Vol 90, No
12, December 1962, pp 1209-1212.

Abstract: [Author's English summary modified] Two patients
were treated with malignant tumors of the colon at the
cecum and sigmoid, respectively, the former with a clini-
cal picture of cholecystitis and the latter suffering from
acute intestinal obstruction. In the former case, the
author took a gland from the mesocolon and mesenterium,
not malignantly infected. The procedure in the second
case was ceco-sigmoidectomy, followed after 20 days by
radical removal of the tumor.

"The Integration of the Health Service."

Belgrade, Narodno Zdravlje, Vol 19, No 6, 1963, pp 181-184.

Abstract: The author describes briefly the solutions sought in various countries (US, England, USSR) to the problems of integration between medicine and the public health service, i.e., between curative and preventive measures. He points out that action leading to health-service integration in Yugoslavia ought not to be the mechanical fusion of institutions but rather an integration of services. However, the integration of services in Croatia has resulted in institutional integration as well in the form of medical centers which amalgamate dispensaries and classic out-patient and polyclinic services with the corresponding hospital departments. The author concludes with a discussion of the importance of planning for integration measures and a rebuttal of unnamed critics of integration in the health services.

"The General Practitioner's Role in Integrated Medical Care."

Belgrade, Narodno Zdravlje, Vol 19, No 7-8, 1963, pp 217-223.

Abstract: The author regards the general practitioner not as outmoded but rather as the front line of medical care, not as one primarily obliged with caring for the ill members of individual families but rather as one responsible for the initial diagnosis and all forms of medical care (including therapy and rehabilitation). Moreover, the author is of the opinion that the general practitioner in Yugoslavia ought to be the epidemiologist in his area, spreading specific immunity through vaccination against disease when possible, mobilizing the community to improve personal and public hygiene standards, and studying ways of preventing accidents at work and in public places.
